

## LGS' technology innovation impresses the Kingdom of Saudi Arabia

More good news flies in from UAE as the National Guard Health Affairs entrusts us for its Java and Dot Net requirements for its KAIMRC initiative and awards LGS with 2 of its prestigious projects.

The National Guard Health Affairs (NGHA) provides highest quality healthcare to patients, but also promoting community health. This is achieved through improving and developing the provided services, initiatives and ongoing projects. NGHA also provides excellent academic opportunities, conducts research and participates in industry and community service programs in the healthcare vertical.

NGHA keeps its commitment to provide quality patient care and safety through its various initiatives one of which is King Abdulillah International Medical Research Center (KAIMRC).

KAIMRC is a specialty center that develops and supports the dissemination of scientific research to help us understand and solve problems, promote health research cooperation, build capacity, and assess the results of the application of basic research.

As part of continues development and modernizing the operation KAIMRC, is embarking on developing and automating several web based registries starting with registry for biological materials as well as, other disease related registries. As well as building medical researches related portal system, as a customizable single access point. LGS has been chosen as able partner to support them on,

E submission (Java) – To convert its research proposal submission from paper format to a web based electronic submission system. For this LGS is to provide onsite support for one year, develop & deploy eSubmission application on Java with CMS.

E learning (Dot Net) – LGS to customize deploy the Learning Management Suite and Virtual Class Room along with its partner G-Cube (WiZDOM) along with providing onsite support, consulting services, training and maintenance.

The purpose of this project is to design, develop and implement a web based diseases registries, E-proposal submission, advance help and customer support desk for medical researchers and department's Portal with its related components which would be executed in various phases.

Congratulations to the entire team who has played a significant role in bagging these projects for LGS.
